

STEALTH CRX

AUTOMATIC CHRONO

Stealth CRX is an automatic chrono with 6 features that make it absolutely unique in the world:

Features:

1) INFRARED KIT WITH FACTORY SET PERSONAL CODE :

the Infrared Transmitter-Receiver Kit (INFRARED KIT) has unique features in its kind, indeed each Transmitter has a personal factory code wich makes it different from the others, this makes absolutely safe the identification of your reference and voids the lap time being modified by other similar devices, it's not enough indeed "blind" the system for a few secons after it has received the signal of a transmitter to void mistakes: for example, if while you are running the lap the first transmitter in the beginning of the pit wall is taken away for the respective driver has retired, going in the straight you'll receive the pulse of the first next transmitter within many meters of difference from the point where you started the lap; if arrives the usual late man, who, after the practice has started, goes in the beginning of the pits, going in the straight your chrono will show a lap time as fantastic as unreal. The same if you have a product with settable channels, you'll know only after losing a practice session that somebody else is working on your same channel. All this can not happen with Pole Star thanks to the code of beach transmitter. A team with many drivers or a group of friends with Stealth can however put just one Transmitter in the pits thank to the automatic code keeping (like a car alarm). All the Receivers of the group will recognize the same STARLANE Transmitter but will be completely immune from other systems.

2) STEALTH IS PROVIDED WITH A GRAPHIC DISPLAY:

as those in use on mobile phones. This solution allowed the development of incomparable simplicity and immediateness in the analysis of stored data and the setting of the desired functions.

3) TWO FUNCTIONS LED "BEST" :

the "BEST" LED lights up on improvement in relation to the previous lap and flashes if the completed lap is the best of the session. This solution means the driver is given the performance information without being distracted. .

4) 240 LAPS MEMORY WITH AUTOMATIC ADMINISTRATION OF 99 PRACTICE SESSIONS:

STEALTH automatically creates a new session each time you go on the track, so that you can quietly analyse the stored times of the different sessions also at the end of the day, without the need to erase the memory before going on track each time.

5) LONG RANGE INFRARED TRANSMITTER (ON THE PIT WALL):

STEALTH 's Infrared Transmitter has got a range of even 30 m.

6) WATER RESISTANT:

STEALTH 's parts that are mounted on the vehicle are water resistant so it is possible to wash it without the need to uninstall the system.
